VI. The Information Disclosure statement (IDS) submitted is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner has considered the information disclosure statements.

Claim Rejections - 35 USC § 103

VII. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Owensby** [US 6647257] in view of **Fan et al.** [US 5959577] *hereinafter Owensby and Fan* respectively.

As per claim 1, **Owensby** teaches:

An information distribution device (10; Fig.1, Abstract) comprising:

A history managing section (20; Fig.2, Col.11; 31-50) for receiving from a plurality of terminals owned by a user movement histories of the user and use histories of the terminals and storing the received histories in a movement history database; (e.g. subscriber's movement history; 28; Fig.2, Col.16; 58-66, Col.10; 51-56, Col.5; 40-67)

An information receiving section (22; Fig.2) for receiving information provided with conditions including an area condition and a timing condition from an information provider and storing the received information in an information storing section; (e.g. provide the information based on subscriber's location and timing history; Col.17; 43-65)

An information filtering section (25; Fig.2) for filtering the information stored in the information storing section by comparing an action area of the user obtained from the movement histories stored in the movement history database with the area condition, to specify information to be transmitted to the user; (e.g. distribute the information based on subscriber's movement history; Col.16; 58-Col.17; 11) and

An information transmitting section for determining a terminal (12; Fig.1, Col.12; 4-17) among the plurality of terminals that satisfies the timing condition of the information specified by the information filtering section, by referring to the use histories stored in the movement history database, and transmitting the information to the terminal. (e.g. distribute the information based on subscriber's movement history and tailored based on subscriber's profile; Col.16; 58-Col.17; 11).

Owensby doesn't teach expressly, a display-conditioned information. However, **Fan** teaches in an analogous art, that the display-conditioned information [Please refer to 212; Fig.12, Col.6; 64-Col.7; 21]. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to modify **Owensby** including a display-conditioned information in order to offer an enterprise for distribution of travel information using network.

Claim 2 is the **method** claim corresponding to **apparatus** claim 1 respectively, and rejected under the same rationale set forth in connection with the rejection of claim 1 respectively, above.
